

Business continuity modules: Civica DataStore

Civica DataStore is our cloud based backup service. As one of our business continuity modules, it is designed to protect your data and make it available for recovery in the event of a disaster.

Combining over 10 years of data storage experience with secure and reliable software, Civica DataStore is Backup as a Service (BaaS). It offers a fully automated backup and recovery service, allowing organisations to backup their encrypted data over the internet and/or dedicated IP links to our remote data centres.

Benefits

- Maximum data availability and security
- Consistent regular data backups with minimum human intervention
- No investment in backup equipment and tape storage
- Data is stored off-site in high security data centres
- No need to acquire and maintain specific storage technical knowledge
- Strong encryption safeguards the confidentiality of your data
- Flexible data retentions to comply with internal policy and industry regulations
- Rapid data recovery online or with an optional data recovery appliance
- Simple and easy to use
- Storage is scalable so you only pay for your requirements
- IT staff are no longer responsible for tape transportation which helps prevent loss of your physical data

Civica DataStore **eliminates capital expenditure on hardware and consumables, and offers reduced operational costs** compared to running backup and recovery in-house. When looking at the costs of running a backup and recovery solution, you need to consider how much manual process time and effort is required to run and administer the solution and how much this costs.

Civica DataStore **automates the entire process**, freeing up staff from managing the process and allowing them to focus on core business tasks. It drives down storage management costs and **significantly improves backup Service Level Agreements** internally.

Return on Investment

Compared to traditional tape backup, DataStore can:

- deliver 40% savings in the total cost of backup.
- reduce the cost of a typical solution from £4,200 per annum to just £1,670.
- minimise resource overhead and eliminate capital cost of hardware and consumables.

Customer reference

"Civica DataStore has allowed us to effectively and easily manage our business critical data. As our backup is now cloud based, we no longer have to worry about buying or changing tapes, storing them securely or allocating resources to undertake these tasks. The process is simple; we know that our data is secure, backed up and easily retrievable in the event of a disaster. A very positive experience with an excellent product."

Steve Blades
ICT Director
Realm Ltd

Civica DataStore is ideal for organisations with data stored over a number of servers and laptops/PC's or sites, through to the more complex organisations with large amounts of data.

It can be easily adapted to suit your needs.

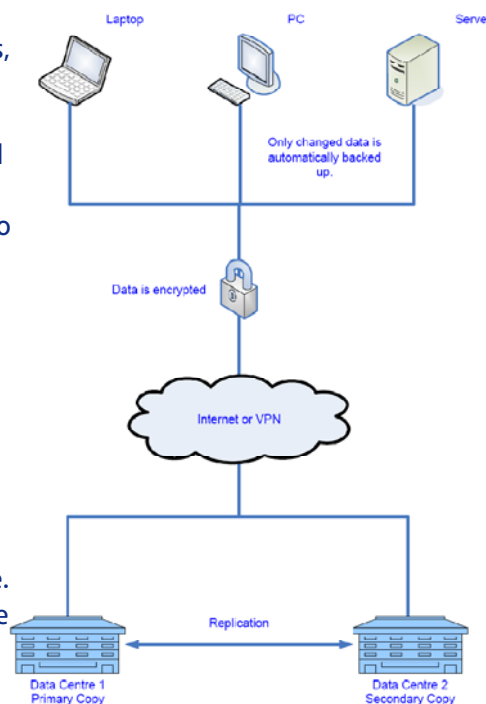

Our technical staff are on hand to provide a service to suit your requirement.

How does it work?

Civica DataStore automatically protects data residing on desktops, laptops, servers and network attached storage devices, according to retention policies and schedules set by the user. Data is compressed, encrypted and sent to one of our highly secure data centres. It is then replicated to a second data centre, assuring the data is safely offsite for disaster recovery and regulatory compliance purposes.

When data recovery is required, users can simply select the data to restore using an intuitive interface. For large data sets, the data can be returned to site for local, high speed LAN recovery.

Our solution is scalable; the service grows and evolves with your business data and meets the needs of small, medium and large organisations.

DataStore and the environment

There are a number of ways that technology can help address your **global responsibility** whilst reducing costs & improving service; using DataStore is just one of them.

Our backup solution eliminates the need to use physical tapes reducing waste. It will also help reduce your energy consumption which will in turn lower your carbon footprint.
